Professional Summary

Full-stack and software engineering graduate (Honours) with experience building web applications, AI-driven prototypes, and cloud-aware solutions. Skilled in JavaScript (ES6+), React, Next.js, Node.js, Python, Java, REST API integration, and AWS architecture fundamentals. Strong track record in delivering responsive UI, performance optimization, SEO improvements, and end-to-end project execution. Interested in building practical AI tools for student and education workflows, including context-aware reading and learning tools.

Technical Skills

Languages: JavaScript (ES6+), TypeScript (basic), Python, Java, C/C++, HTML5, CSS3, Dart, Verilog

Frontend: React.js, Next.js, Responsive UI, Cross-browser compatibility, Accessibility (WCAG 2.1), Performance optimization

Backend: Node.js, REST APIs, API integration, WebSockets, Firebase (exposure)

Cloud and DevOps: AWS (EC2, S3, RDS, Lambda, VPC, IAM, CloudFormation), CI/CD concepts, Monitoring basics

CMS and SEO: WordPress, PHP, ACF, Yoast SEO, Schema.org, Google Search Console, Google Analytics, Semrush

Data and ML: Pandas, NumPy, scikit-learn, SMOTE, Model explainability (SHAP, LIME), Data preprocessing

Tools: Git, GitHub, Postman, Figma, Jira, Trello, MS Teams, Slack, Agile/Scrum

Experience

WordPress Developer and SEO Intern

Dec 2023 – Mar 2024

Willify Pty Ltd, Bayswater, Melbourne

- Developed and maintained a large-scale WordPress website, implementing custom themes and plugins to improve UX and maintainability.
- Integrated Advanced Custom Fields (ACF) and Yoast SEO, improving search visibility and achieving first-page rankings for 5+ keywords.
- Optimized Core Web Vitals and page performance using analytics insights, improving site performance by 20%.
- Implemented structured data (Schema.org) to improve indexing efficiency and content discoverability.
- **Tech:** WordPress, PHP, JavaScript, HTML, CSS, ACF, Yoast, Google Analytics, Search Console, Semrush

Front-end Developer Intern

Nov 2022 – Mar 2023

Deakin Launchpad, Burwood, Melbourne

- Built responsive, cross-platform interfaces using Flutter, ensuring consistent UI behavior and good performance across devices.
- Integrated 10+ REST APIs to fetch and render near real-time financial data, working closely with backend teams on API contracts.
- Participated in Agile sprints and code reviews, maintaining clean code practices and version control workflows using Git and GitHub.
- Collaborated with designers via Figma to implement UI/UX aligned with product requirements.
- **Tech:** Flutter (Dart), REST APIs, Git, GitHub, Firebase, Figma

Projects

AI Gesture Detection Based Drone Control System

Jul 2024 – Nov 2024

GitHub: github.com/souravsharm/TelloDrone-GestureDetection

- Engineered a real-time gesture recognition workflow for drone control using DJI Tellopy APIs and a Keras-based model.
- Integrated ROS2 for stable operations and messaging, improving reliability in command execution.
- Built a live command interface using JavaScript and WebSockets for low-latency control and telemetry.
- **Keywords:** real-time systems, API integration, WebSockets, ML inference, robotics, ROS2
- **Tech:** Python, JavaScript, ROS2, Git, GitHub

Research Project: Chronic Kidney Disease Prognosis Using AI

Jul 2023 – Feb 2024

DOI: 10.1101/2024.04.08.24305414

- Built data preprocessing pipelines in Python on Google Colab, including normalization and outlier detection to improve data quality.
- Improved model performance with an 8% uplift in F1-score and increased overall accuracy from 86% to 94%.
- Applied SHAP and LIME to interpret model outputs and identify the top critical clinical features impacting prognosis.
- **Keywords:** supervised learning, feature importance, model explainability, preprocessing, evaluation metrics
- **Tech:** Python, Pandas, NumPy, scikit-learn, SMOTE, SHAP, LIME, Google Colab

Smart Security Vault System (IoT)

Mar 2021 – Jun 2023

Video: youtube.com/watch?v=lu3OdeYKoKc

- Developed an IoT security system using Raspberry Pi 4, integrating sensors and IFTTT APIs for real-time email notifications.
- Implemented event-driven logic in Python for reliable monitoring and alerting.
- **Keywords:** IoT, sensors, automation, event-driven systems, API integration
- **Tech:** Python, Raspberry Pi, IoT, IFTTT, APIs

Education

Bachelor of Software Engineering (Honours)

2024

Deakin University, Burwood, Melbourne

WAM: 72.4 Specialization: Internet of Things (IoT), Robotics, Cyber-Physical Systems

Certifications

- AWS Certified Solutions Architect Associate (2024)
- AWS Academy Graduate: AWS Academy Cloud Architecting (2023)
- React Essential Training, LinkedIn Learning (2025)
- Batch Script Programming, Udemy (2024)

Freelance Focus

- Build MVPs and internal tools using React, Next.js, Node.js, and REST APIs.
- Implement practical AI features: summarization, classification, retrieval-based assistants, explainable predictions.
- Integrate third-party APIs, automate workflows, optimize performance, and deploy on AWS.
